Introduction

We are confident that you will be delighted with your BLUE SEAL Fryers, and it will become a most valued appliance in your commercial kitchen.

To ensure you receive the utmost benefit from your new BLUE SEAL Appliance, there are two important things you can do.

Firstly:

Please read the instruction book carefully and follow the directions given. The time taken will be well spent.

Secondly:

If you are unsure of any aspect of the installation, instructions or performance of your appliance, contact your BLUE SEAL dealer promptly. In many cases a phone call could answer your question.

CE Only:

These instructions are only valid if the country code appears on the appliance. If code does not appear on appliance, refer to supplier of this appliance to obtain technical instructions for adapting appliance to conditions for use in that country.

Warning

IMPROPER INSTALLATION, ADJUSTMENT, ALTERATION, SERVICE OR MAINTENANCE CAN CAUSE PROPERTY DAMAGE, INJURY OR DEATH. READ THE INSTALLATION, OPERATING AND MAINTENANCE INSTRUCTIONS THOROUGHLY BEFORE INSTALLING OR SERVICING THIS APPLIANCE.

Warning

INSTRUCTIONS TO BE FOLLOWED IN THE EVENT THE USER SMELLS GAS ARE TO BE POSTED IN A PROMINENT LOCATION. THIS INFORMATION SHALL BE OBTAINED BY CONSULTING THE LOCAL GAS SUPPLIER.

Warning

GREAT CARE MUST BE TAKEN BY THE OPERATOR TO USE THE EQUIPMENT SAFELY TO GUARD IT AGAINST RISK OF FIRE.

- **THE APPLIANCE MUST NOT BE LEFT ON UNATTENDED.**
- **IT IS RECOMMENDED THAT A REGULAR INSPECTION IS MADE BY A COMPETENT SERVICE PERSON TO ENSURE CORRECT AND SAFE OPERATION OF YOUR APPLIANCE IS MAINTAINED.**
- **DO NOT STORE OR USE GASOLINE OR OTHER FLAMMABLE VAPOURS OR LIQUIDS IN THE VICINITY OF THIS OR ANY OTHER APPLIANCE.**
- **DO NOT SPRAY AEROSOLS IN THE VICINITY OF THIS APPLIANCE WHILE IT IS IN OPERATION.**

Caution

- **This appliance is for professional use and is only to be used by qualified persons.**
- **Only authorised service persons are to carry out installation, servicing or gas conversion operations.**
- **Components having adjustments protected (e.g. paint sealed) by the manufacturer should not be adjusted by the user / operator.**
- **DO NOT operate the appliance without the legs supplied fitted.**

Model Numbers Covered in this Specification

- GT45 'FAST FRI' GAS FRYER (Single Tank - 20Ltr).
 GT46 'FAST FRI' GAS FRYER (Twin Tank - 13Ltr per Tank).
 GT60 'FAST FRI' GAS FRYER (Single Tank - 31Ltr).

Gas Supply Requirements

- Australia:

	Natural Gas	LP Gas (Propane)
Input Rating (N.H.G.C.)	90 MJ/hr	90 MJ/hr
Supply Pressure	1.13 - 2.00 kPa	2.75 - 3.00 kPa
Burner Operating Pressure (*)	0.98 kPa (*)	2.50 kPa (*)
Gas Connection	3/4" BSP Male	

- New Zealand:

	Natural Gas	LP Gas
Input Rating (N.H.G.C.)	90 MJ/hr	90 MJ/hr
Supply Pressure	1.13 - 2.00 kPa	2.75 - 3.00 kPa
Burner Operating Pressure (*)	0.98 kPa (*)	2.50 kPa (*)
Gas Connection	3/4" BSP Male	

- United Kingdom & EU (CE)

Category: **II_{2H3P}(20. 37), II_{2H3B/P}(20, 28-30),**
 Flue Type: **A₁.**

	Natural Gas (G20)	Propane (G31)	LP Gas (G30-G31)
Heat Input (nett)	22.5 kW	22.5 kW	25.2 kW
Gas Rate	2.26 m ³ /hr	1.75 kg/hr	1.99 kg/hr
Supply Pressure	20 mbar	37 mbar	28-30 mbar
Burner Operating Pressure (*)	9.8 mbar (*)	25 mbar (*)	
Gas Connection	3/4" BSP Male		

NOTE:

- (*) Measure burner operating pressure at Lower Test Point (Out) on the gas control valve, with both burners operating at 'High Flame' setting. Refer to 'Gas Conversion and Specification' Section for further details.

Specifications

- All Other Markets:

		Natural Gas	Town Gas (**)
Input Rating (N.H.G.C.)		90 MJ/hr	90 MJ/hr
Supply Pressure	Non-CE	1.13 - 2.0 kPa	0.75 - 1.5 kPa
	CE	25 mbar	N/A
Burner Operating Pressure (*)		0.98 kPa (*)	0.5 kPa (*)
Gas Connection		$\frac{3}{4}$ " BSP Male	

		LP Gas (Propane)	Butane
Input Rating (N.H.G.C.)		90 MJ/hr	90 MJ/hr
Supply Pressure	Non-CE	2.75 - 3.0 kPa	2.75 - 3.0 kPa
	CE	37 mbar	37 mbar
Burner Operating Pressure (*)		2.5 kPa (*)	2.5 kPa (*)
Gas Connection		$\frac{3}{4}$ " BSP Male	

NOTE:

- (*) Measure burner operating pressure at Lower Test Point (Out) on the gas control valve, with both burners operating at 'High Flame' setting.
- (**) TOWN GAS Option is only available with specific ex-factory built Town Gas models, which can also be converted to any other gas. Standard models can only be converted between Nat. Gas, LP Gas and Butane, but not Town Gas.
- Refer to 'Gas Conversion and Specifications' section of this manual for further details.

GT45 / GT46 'VEE - RAY' GAS FRYERS

-  1. Primary Gas Entry Point.
-  2. Optional Gas Entry Point.

GT60 'VEE - RAY' GAS FRYER

-  1. Primary Gas Entry Point.
-  2. Optional Gas Entry Point.

Installation

Installation Requirements

NOTE:

- **It is most important that this appliance is installed correctly and that operation is correct before use. Installation shall comply with local, gas, health and safety requirements.**
- **This appliance shall be installed with sufficient ventilation to prevent the occurrence of unacceptable concentrations of health harmful substances in the room, the appliance is installed in.**

Blue Seal 'FAST FRI' Gas Fryers are designed to provide years of satisfactory service, and correct installation is essential to achieve the best performance, efficiency and trouble-free operation.

This appliance must be installed in accordance with National installation codes and in addition, in accordance with relevant National / Local codes covering gas and fire safety.

Australia / New Zealand:	AS/NZS 5601.1	- Gas Installations.
United Kingdom:	Gas Safety (Installation and Use) Regulations	1998.
Ireland:	IS 820	- Non Domestic Gas Installations.

Installations must be carried out by qualified service persons only. Failure to install equipment to the relevant codes and manufacturer's specifications shown in this section will void the warranty.

Components having adjustments protected (e.g. paint sealed) by manufacturer, are only to be adjusted by an authorised service agent. They are not to be adjusted by the installation person.

Unpacking

- Remove all packaging and transit protection from appliance including all protective plastic coating from door outer panel and exterior stainless steel panels.
- Check equipment and parts for damage. Report any damage immediately to carrier and distributor.
- Report any deficiencies to distributor who supplied appliance.
- Check available gas supply is correct to as shown on rating plate located on inside of access door.
- Check the following parts have been supplied with the appliance:

	GT45	GT46	GT60
Baskets	2	2	3
Basket Trays	1	2	1
Lid	1	1	1
Drain Stick	1	1	1

Location

1. This appliance must be installed in a suitably ventilated room to prevent dangerous build up of combustion products.
2. Installation must allow for a sufficient flow of fresh air for combustion air supply.

Combustion Air Requirements

All Gas Types 24 m³/hr minimum.

3. Position appliance in its approximate working position.
4. All air for burner combustion is supplied from underneath appliance. Legs must always be fitted and no obstructions placed beneath or around base of appliance, as obstructions will cause incorrect operation and / or failure of appliance.

NOTE: Do not obstruct or block appliances flue. Never directly connect a ventilation system to appliance flue outlet.

Clearances

NOTE:

- **Only non-combustible materials can be used in close proximity to this appliance.**
- **To facilitate easy operation, drainage and servicing of appliance, a minimum of 600mm clearance should be maintained at front of appliance.**

Any gas burning appliance requires adequate clearance and ventilation for optimum and trouble-free operation. The following minimum installation clearances are to be adhered to:

	Combustible Surface	Non Combustible Surface
Left / Right Hand Side	50mm	0mm
Rear	50mm	0mm

Assembly

This model is delivered completely assembled. Ensure that the legs are securely attached.

NOTE:

- **This appliance is fitted with adjustable feet to enable the appliance to be positioned securely and level. This should be carried out on completion of gas connection. Refer to 'Gas Connection' section below.**

Optional Accessories (Refer to Replacement Parts List)

- Plinth Kit. For installation details, refer to instructions supplied with each kit.

Gas Connection

NOTE: ALL GAS FITTING MUST ONLY BE CARRIED OUT BY A QUALIFIED SERVICE PERSON.

Flexible Hose Connection

If a Gas Hose assembly is used to connect this appliance, hose and all fittings must have a minimum 3/4" (Natural Gas) or 1/2" (LPG) inside bore diameter to ensure gas flow rate capacity required by this appliance is achieved.

This must be verified by operating pressure testing at maximum gas supply demand condition.

The Gas Hose assembly should also be classified for use in commercial kitchen conditions, appliance will be used in.

Recommended Gas Hose Assembly Specification:

- AS/NZS 1869 Class B or D compliant or equivalent, that meets the following requirements:-

Class	Max Working Pressure at 23 ± 2°C	Working Temperature Range	Resistance to Oil
B	7.0 kPa	- 20°C to + 125°C	Oil resistant lining and cover.
D	2.6 MPa		

1. Blue Seal GT45 / GT46 / GT60 Fryers do not require an electrical connection, they function totally on gas supply only.

Installation

2. It is essential that gas supply is correct for the appliance to be installed and that adequate supply pressure and volume are available. The following checks should be made before installation:-
 - a. **Gas Type**, appliance has been supplied for, is shown on coloured stickers located above gas entry point and next to rating plate. Check that this is correct for gas supply the appliance is being installed for. Gas conversion procedure is detailed in this manual.
 - b. **Supply Pressure** required for this appliance is shown in 'Specifications' section of this manual. Check gas supply to ensure that adequate supply pressure exists.
 - c. **Input Rate** of this appliance is also shown on rating plate fitted to inside of access door and in 'Specifications' section of this manual. Input rate should be checked against available gas supply line capacity. **Particular note should be taken if appliance is being added to an existing installation.**

NOTE: It is important that adequately sized piping runs directly to connection joint on appliance, with as few tees and elbows as possible to give maximum supply volume.

3. A suitable jointing compound which resists the breakdown action of LPG must be used on every gas line connection, unless compression fittings are used.
Connection to appliance is $3/4$ " BSP male.

NOTE: A Manual Isolation Valve must be fitted to individual appliance supply line.

4. Correctly locate appliance into its final operating position and using a spirit level, adjust legs so that unit is level and at correct height.
5. Connect gas supply to appliance.
6. Check all gas connections for leakages using soapy water or other gas detecting equipment.

Warning

DO NOT USE A NAKED FLAME TO CHECK FOR GAS LEAKAGES.

7. Check gas supply pressure is as shown in 'Specifications' section, 'Gas Supply Requirements' table.

NOTE: Measure supply pressure at upper test point (Supply Pressure) on gas control valve.

8. Light Pilot Burners. Refer to 'Operation' section, 'Lighting Pilot Burners'.
9. Check pilot flame size. Re-adjust if required, using pilot burner adjusting screw (See Fig 2 below), and as shown in 'Gas Conversion and Specifications' section, 'Pilot Burner Flame Adjustment'.

Caution

Ensure the fryer tank(s) is / are filled with either water or oil prior to starting Main Burners otherwise the fryer tank(s) may be damaged.

10. Light the Main Burners. Refer to 'Operation' section, 'Lighting Main Burners'.
11. Verify supply pressure is still correct.
12. Check Main Burner operating pressure (Adjust, using 'Operating Pressure Adjusting Screw' on gas control valve, see Fig 2), and as shown in 'Gas Conversion and Specifications' section, 'Gas Controller - Main Burner Operating Pressure Adjustment'.

NOTE: Insufficient gas supply line capacity, indicated by operating pressure drop during maximum gas supply demand, is **NOT ACCEPTABLE** and may invalidate the manufacturers warranty for this appliance.

Commissioning

Carry out the following commissioning checks before handing over the fryer for use, to ensure that fryer operates correctly and operator(s) understand correct operating procedure.

1. Before leaving the new installation;
 - a. Check the following functions in accordance with the operating instructions specified in the 'Operation' section of this manual.
 - Light the Pilot Burners.
 - Light the Main Burners.
 - Check the Thermostat Operation (refer to 'Operation' section of this manual).
 - b. Thermostat operation check should be carried out by filling fryer with oil / shortening to oil 'FILL LEVEL' mark shown at rear of tank (refer to 'Filling the Tank' in 'Operation Section' of Manual) and setting thermostat to 180°C. Light pilot burners and turn **On** main burners in accordance with 'Operation Instructions' found in this manual.
 - c. Calibration of thermostat should be checked once oil is up to temperature. If a discrepancy is found, thermostat calibration should be referred to the supplier.
 - d. Ensure that each operator has been instructed in areas of correct lighting, operation and shutdown procedures for this appliance.

Initial Start-Up

- a. For first time use of the new fryer, prior to using for cooking product, fill the fryer with oil and operate for about 1 hour at the **Full Flame** setting to remove any fumes or odours which may be present in the new appliance.
 - b. Refer to the Operation Section of this manual for details on how to operate the fryer.
2. This manual must be kept by owner for future reference and a record of ***Date of Purchase, Date of Installation*** and ***Serial Number of Unit*** recorded and kept with this manual. **(These details can be found on Rating Plate attached to rear of access door. Refer to Figure 1 in 'Gas Connection' section).**

NOTE: If for some reason it is not possible to get the appliance to operate correctly, shut 'Off' gas supply and contact supplier of this unit.

Operation

Operation Guide

Warning

GREAT CARE MUST BE TAKEN BY OPERATOR, TO USE THE FRYER SAFELY, TO GUARD AGAINST RISK OF INJURY AND FIRE.

- **DO NOT LEAVE FRYER UN-ATTENDED DURING OPERATION.**
- **DO NOT REPLENISH THE OIL (FRYING MEDIUM) IN THE FRYER WHEN THE FRYER IS HOT.**
- **DO NOT OVER FILL THE OIL (FRYING MEDIUM) IN THE FRYER ABOVE THE TOP LEVEL MARK.**
- **DO NOT ALLOW THE OIL (FRYING MEDIUM) IN THE FRYER TO FALL BELOW THE LOWER LEVEL MARK.**
- **DO NOT ALLOW THE OIL (FRYING MEDIUM) IN THE FRYER TO OVERHEAT.**
- **DO NOT INTRODUCE WET FOOD OR WATER INTO THE HOT OIL (FRYING MEDIUM).**
- **DO NOT USE FLAMMIBLE SOLVENTS AND CLEANING AIDS ON OR IN CLOSE PROXIMITY TO THE FRYER WHILST THE FRYER IS STILL HOT.**

Caution

- **This appliance is for professional use and is only to be used by qualified persons.**
- **Only authorised service persons are to carry out installation, servicing or gas conversion operations.**
- **Components having adjustments protected (e.g. paint sealed) by the manufacturer should not be adjusted by the user / operator.**

Description of Controls

- (GT45 Illustrated)

Warning

THE FLUE OUTLET AREA IS A HIGH TEMPERATURE HIGHLY FLAMMABLE AREA

DO NOT BANG, SHAKE OR HOLD FRYER BASKETS IN THE FLUE OUTLET AREA - THIS IS A HIGH RISK AREA FOR FLAMMABLE MATERIAL (e.g. OIL / FAT AND DEBRIS FROM BASKETS COULD IGNITE HERE).

High Temperature Flue Area

Filling the Tank(s)

Warning

DANGER OF FIRE EXISTS IF THE OIL LEVEL IS BELOW THE MINIMUM 'LO' INDICATED LEVEL

NOTE: BLUE SEAL 'FAST-FRI' fryers can be used with both oil and shortening.

Before filling tank, always check that drain valve(s) behind door is (are) closed. A locking slide is provided on these valves and this should always be in the locked in position during use. Set the thermostat to the required operating temperature, the oil will expand as heated and will reach the upper level marked when the oil is hot (180 - 190°C).

OIL - Carefully fill fryer tank with oil until the lower 'FILL-LEVEL' mark is reached.

- The GT45 fryer will hold 20 litres of oil.
- The GT46 fryer will hold 13 litres of oil per tank.
- The GT60 fryer will hold 31 litres of oil.

SHORTENING - Ideally shortening should be pre-melted prior to putting it into tank. This is normally done in a suitable vessel on a boiling table burner. The liquefied shortening can then be poured into the tank until it reaches the 'FILL LEVEL' mark.

- The GT45 fryer will hold 37lbs shortening.
- The GT46 fryer will hold 24lbs shortening per tank.
- The GT60 fryer will hold 46.5lbs shortening.

Operation

Pre-Heating

NOTE: When pre-melting shortening, only heat the shortening until it is just liquefied. Do not bring the shortening up to high temperature as handling of hot shortening is dangerous.

- If pre-melting of shortening is not possible, carefully cut the shortening in to small pieces and pack into the tank.
- Light main burners and manually cycle burners **On/Off** until shortening has liquefied. Ideally main burners should be cycled **On** for 5 seconds and **Off** for 10 seconds. Repeat the cycle until all the shortening is melted. Following this procedure should allow shortening to liquefy gradually without scorching. Once shortening has liquefied, it can be brought up to fryer operating temperature.
- To speed up this process, break up the shortening and stir carefully during the melting process. Add more shortening until the tank is filled to the level marked on the tank side. Refer to Fig 4 above.

NOTE: Running burners continuously will cause shortening in contact with the tank to overheat, resulting in premature oil breakdown. Never allow shortening to smoke while melting as this indicates that the temperature is too high. If shortening starts smoking, increase main burner 'Off' intervals.

Lighting the Pilot Burners

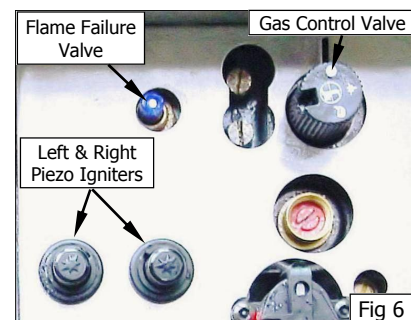

GT45 Fryer (Single Tank)

1. Rotate gas control knob to **Pilot** position and hold knob depressed.
2. At the same time hold flame failure button depressed.
3. Depress piezo igniter until right hand pilot ignites.
4. Hold gas control knob and flame failure button depressed for approx. 10 to 15 seconds after igniting pilot burner, then release, both pilot burners should remain alight.
5. If pilot burners do not ignite, repeat Items 1 to 4 above.

GT60 Fryer (Single Tank)

1. Rotate gas control knob to **Pilot** position and hold knob depressed.
2. At the same time hold flame failure button depressed.
3. Depress right and left hand piezo igniters until right and left hand pilots ignite.
4. Hold gas control knob and flame failure button depressed for approx. 10 to 15 seconds after igniting both pilot burners, both pilot burners should remain alight.
5. If pilot burners do not ignite, repeat Items 1 to 4 above.

GT46 Fryer (Twin Tank)

1. Rotate gas control knob to the position marked 'PILOT' and hold depressed.
2. Depress the piezo igniter until pilot ignites.
3. Continue holding the gas control knob depressed for approx. 10 to 15 seconds after igniting pilot burner, pilot burner should remain alight.
4. If pilot burner does not ignite, repeat Items 1 to 3 above.
5. To ignite the second pilot burner, repeat Items 1 to 3 above for the second gas control valve.

Lighting the Main Burners

1. Ensure that pilot burners are alight.
2. Depress and rotate gas control knob to **Full Flame** position.
3. Main burners will ignite automatically off pilot burners.

Fig 8

NOTE:

- If main burners are turned 'On' immediately after pilot burners are lit, a delay of approximately 30 seconds will occur until thermopile (which provides power to open the main valve) has heated up off the pilot burners.
- Main burners will not light if frying medium temperature is above thermostat set temperature.
- Turning gas control knob from pilot to main burner position will allow manual cycling of burners 'On' and 'Off' when melting shortening.

Setting the Operating Temperature

1. Rotate thermostat to the required temperature.
2. Temperature can be set from 145°C to 195°C, although we do not recommend any food to be cooked above 190°C.
3. Main burners will operate automatically to maintain this temperature.

Fig 9

NOTE: As a safety precaution all BLUE SEAL 'FAST-FRI' Fryers feature an Over-Heat Control, which will 'Turn Off' the fryer should there be a thermostat failure and the oil temperature reaches over 220°C.

Turning 'OFF' the Fryer

To the 'Pilot' Position

- a. Depress and rotate the gas control valve clockwise to the 'Pilot' position.
- b. The main burners will extinguish and the 'Pilot' will remain alight.

To the 'Off' Position

- a. Depress and rotate the gas control valve fully clockwise to the 'Off' position.
- b. The 'Pilot' burners will extinguish.

IMPORTANT:

Should any abnormal operation like;

- ignition problems,
- abnormal burner flame,
- burner control problems,
- partial or full loss of burner flame in normal operation,

If any of the above problems are noticed, the appliance requires **IMMEDIATE** service by a qualified service person and should not be used until a service is carried out.

Cleaning and Maintenance

Opening the Drain Valve

Warning

HOT OIL WILL BURN - DO NOT RUSH THIS JOB.

- a. Lift locking slide on valve handle (Fig 11) to release valve.
- b. While holding locking slide in withdrawn position, rotate handle anticlockwise (Fig 12) to open valve.
- c. When valve is closed, locking slide will drop down over locking valve to prevent accidental opening of valve as shown in Fig.11.

4. Do not empty total fryer contents into one large container, as this will be dangerous and may be difficult, when lifted up, to pour hot oil back into tank.
5. Slip a muslin or other suitable filter bag over the end of the drain valve. Crumbs will be caught in the bag but frying medium will strain freely through into receptacle.
6. Open drain valve slowly to minimise splashing, and take care not to overfill container.
7. If necessary, use the drain stick (see Fig 13) to dislodge any blockages in the drain.
8. When tank has been drained, use a ladle or small pan with a handle and dip into hot frying medium from container and pour around sides and bottom of tank to wash out crumbs and particles adhering to tank.
9. Continue to dip and pour until all crumbs are washed down and into filter bag.
10. Open drain valve fully and check for any particles or crumb residue lodged in valve. Clean out valve with a stiff nylon brush. Do not use a wire brush as this may damage the valve seating and will eventually lead to leakage. If obstruction cannot be removed with a brush, use a wooden probe to dislodge obstruction.
11. Wipe all exterior panels with a cloth dampened with detergent and rinse off any residue with clean warm water.
12. Clean Control Panel with a damp cloth lightly moistened with a solution of water and a commercial quality foodservice approved detergent.
13. Once the daily cleaning operation is completed, close drain valve and pour frying medium back into tank.

General

Warning

DO NOT USE FLAMMIBLE SOLVENTS AND CLEANING AIDS ON OR IN CLOSE PROXIMITY TO FRYER WHILST FRYER IS STILL HOT.

Caution

Always turn 'Off' gas supply before cleaning.

This appliance is not water proof.

Do not use water jet spray to clean interior or exterior of this appliance.

- To achieve the best results, cleaning must be regular and thorough and all controls and mechanical parts checked and adjusted periodically by a qualified service person. If any small faults occur, have them attended to promptly.
- Don't wait until they cause a complete breakdown. It is recommended that the appliance is serviced every 6 months.
- Clean the fryer regularly. A clean fryer looks better, will last longer and will perform better.

NOTE:

- **DO NOT use abrasive detergents, sharp scrapers, strong solvents or caustic detergents as they could corrode or damage the fryer.**
- **Ensure that any detergent or cleaning material have been completely removed after each cleaning.**

To keep your fryer clean and operating at peak efficiency, follow the procedures below:-

Draining and Daily Cleaning

1. At end of each day or at end of each shift, if frying schedule is heavy, frying medium should be drained and filtered into a receptacle.

Warning

DO NOT ATTEMPT TO MOVE FRYER WHILST FRYER IS FULL OF OIL.

Caution

**Never drain fryer with burners turned 'ON'
Always switch 'OFF' fryer before draining or re-filling tank.**

2. Always filter fryer when cool zone under burners is hot and liquid. A cold fryer heated up won't drain, because frying medium in this zone will remain hard if using solid fat / oils.
3. Screw drain extension pipe onto end of drain valve (see Fig 10) and position a suitable container and filter under drain extension pipe.

Cleaning and Maintenance

Weekly Cleaning

NOTE: If fryer usage is very high, we recommend that the weekly cleaning procedure is carried out more frequently.

1. Proceed to drain and filter the tank as for 'Daily Cleaning'. Do not refill tank with frying medium until it has been cleaned as shown below.
2. Fill fryer with cold water to normal fill level and add a high quality commercial cleaner that has been specifically formulated for fryers. *All purpose cleaners are not recommended.*

NOTE: Never use a caustic or lye solution, as this will leave a fat destroying film on tank.

3. Heat water to approximately 80-90°C.
4. Clean fryer baskets at the same time by simply immersing them in cleaning solution. Allow fryer to soak for 5-10 minutes or as directed on cleaner instructions. Remove baskets and turn **Off** main burners.
5. Scrub baskets and fryer tank with a stiff nylon bristle brush to remove any remaining deposits. **DO NOT use a wire brush, as this will scratch the tank sides.**
6. Empty fryer and rinse thoroughly with water. Use a 1 part vinegar to 15 parts water solution to rinse tank and neutralise any cleaner residue. If this proves unsuitable for cleaner being used, use a weaker solution of up to 1 part vinegar to 25 parts water.
7. Rinse tank thoroughly with water, drain and dry.
8. Refill tank with new filtered frying medium.

Stainless Steel Surfaces

- a. With tank(s) drained, cleaned and dried as shown above, clean exterior surfaces of fryer with hot water, a mild detergent solution and a soft cloth.
- b. Dry all components thoroughly with a dry cloth and polish with a soft dry cloth.
- c. To remove any discoloration, use an approved stainless steel cleaner or stainless steel wool. Always rub in direction of grain.

Periodic Maintenance

NOTE: All maintenance operations should only be carried out by a qualified service person.

To achieve the best results, cleaning must be regular and thorough. All controls and mechanical parts should be checked and adjusted periodically by a qualified service person. If any small faults occur, have them attended to promptly. Don't wait until they cause a complete breakdown. It is recommended that the appliance is serviced every 6 months.

Guide to Cooking Problems with Fryer

This section provides an easy reference guide to the more common problems that may occur during operation of your equipment. The fault finding guide in this section is intended to help you correct, or at least accurately diagnose problems with your equipment.

Although this section covers the most common problems reported, you may encounter a problem not covered in this section. In such instances, please contact your local authorised service agent who will make every effort to help you identify and resolve the problem. Please note that the service agent will require the following information:-

- **Model Code and Serial Number of appliance, which can be found on Rating Plate located on inside of access door.**

Fault	Possible Cause	Remedy
Frying medium foaming.	Presence of soap or detergent residue from cleaning tank.	Rinse fryer thoroughly three times with clean water. Ensure fryer is perfectly dry before re-filling with frying medium.
	Excessive breakdown of frying medium.	Add fresh frying medium daily to replace contents every 3-5 days.
	Continual frying of food with excess moisture.	Remove excess moisture from foods to be fried.
	Continued overheating of oil.	Check thermostat setting. Turn down heat to around 140°C (Standby) when use is quiet
	Overloading	Maintain 1-8 ratio of food to frying medium.
Gumming.	Heating frying medium too rapidly.	When charging fryer or starting up, melt frying medium gradually.
	Continued overheating of frying medium.	Check oil temperature by using a thermometer or thermocouple.
	Frying oil broken down.	Check amount of fresh frying medium added to fryer to be sure 'turnover' is adequate.
	Using wrong frying medium.	Some frying mediums form gums when used in a deep fryer. e.g safflower oil.
Greasy foods.	Frying at too low a temperature.	Increase temperature and check thermostat setting.
	Inadequate preparation of food.	Be sure foods (especially potatoes) are 'cured' correctly.
	Excessive quantities of breading or batter.	Remove surplus breading or batter.
	Placing food in frying medium direct from freezer.	Allow frozen foods to thaw before frying.
	Surplus moisture in and on surface of food.	Drain and dry foods before frying.
	Frying medium in advanced stages of breakdown.	Discard 'old' frying medium and refill fryer with new medium.
	Use of dripping or other unrefined oil.	Due to low smoking point, cooking in these oils at lower temperatures will result in greater oil absorption by food.
	Using wrong kind of cooking oil.	Always use a completely refined and deodorised cooking oil.

Fault Finding

Fault	Possible Cause	Remedy
Rapid oil breakdown.	Inadequate frying oil turnover.	Adjust procedures to fry more food in fryer to increase turnover.
	Oil overheating.	Check oil temperature by using a thermometer or thermocouple.
	Contamination.	Filter or strain oil daily.
	Poor cleaning procedures.	Clean fryer each day or at least once a week and rinse thoroughly. Dry fryer before use.
	Presence of copper or brass in the fryer equipment.	Remove all copper or brass fittings from contact with oil.
	Overloading fryer.	Maintain 1-8 ratio of food to frying oil.
	Food excessively moist.	Drain and dry food before frying.
	Overheating oil on 'Standby' mode.	Turn control to Pilot position during idle ('Standby') periods.
Oil smoking.	Insufficient turnover of oil.	Maintain a minimum quantity of oil in fryer for more rapid turnover or increase quantity of food fried in fryer. Replace with fresh oil every 3 to 5 days.
	Continual frying with excess moisture on food.	Drain foods before frying, pat food dry.
	Contamination of oil.	Filter or strain daily to remove contaminants.
	Oil overheating.	Check oil temperature by using a thermometer or thermocouple.
	Rapid breakdown of oil.	Use a stable frying oil.
	Use of unrefined oils.	Dripping smokes at lower temperature than refined and deodorised oils.
Darkening of oil.	Presence of salt on the food.	Salt food after frying and away from fryer.
	Foods dipped in batter high in egg yolk.	Reduce egg content of batter, replace part egg with milk.
	Contamination of oil.	Filter or strain oil daily to remove contaminants.
	Poor cleaning practice.	Clean fryer at least once a week or each day in cases of heavy usage. Ensure fryer is perfectly dry before use.
	Overheating of oil.	Check oil temperature by using a thermometer or thermocouple.
	Insufficient oil turnover.	Top up daily to replace contents of fryer in 3 to 5 days.
	Cooking foods with high sugar levels.	Potatoes are usually high in reduced sugars at the end of a season. When fried, they will darken quickly and discolour the oil.

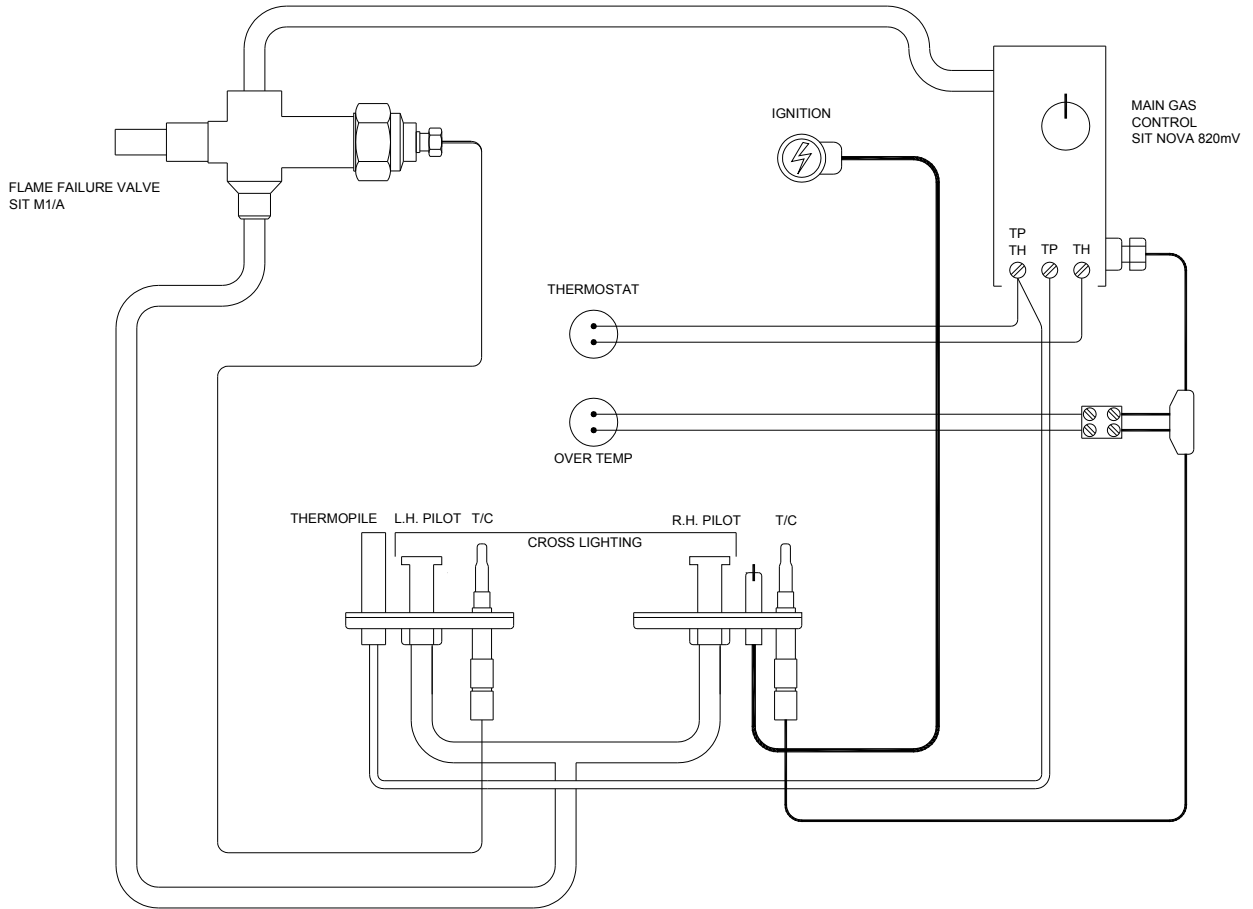

NOTE: Excessive oil usage is an indication of high absorption of oil into the food. This is a function of temperature and character of the goods being fried - NOT due to type of oil being used (unless refined oils are being used). Any variation in apparent life of oil is always due to one or more of the causes mentioned above.

Fault Finding the Gas System

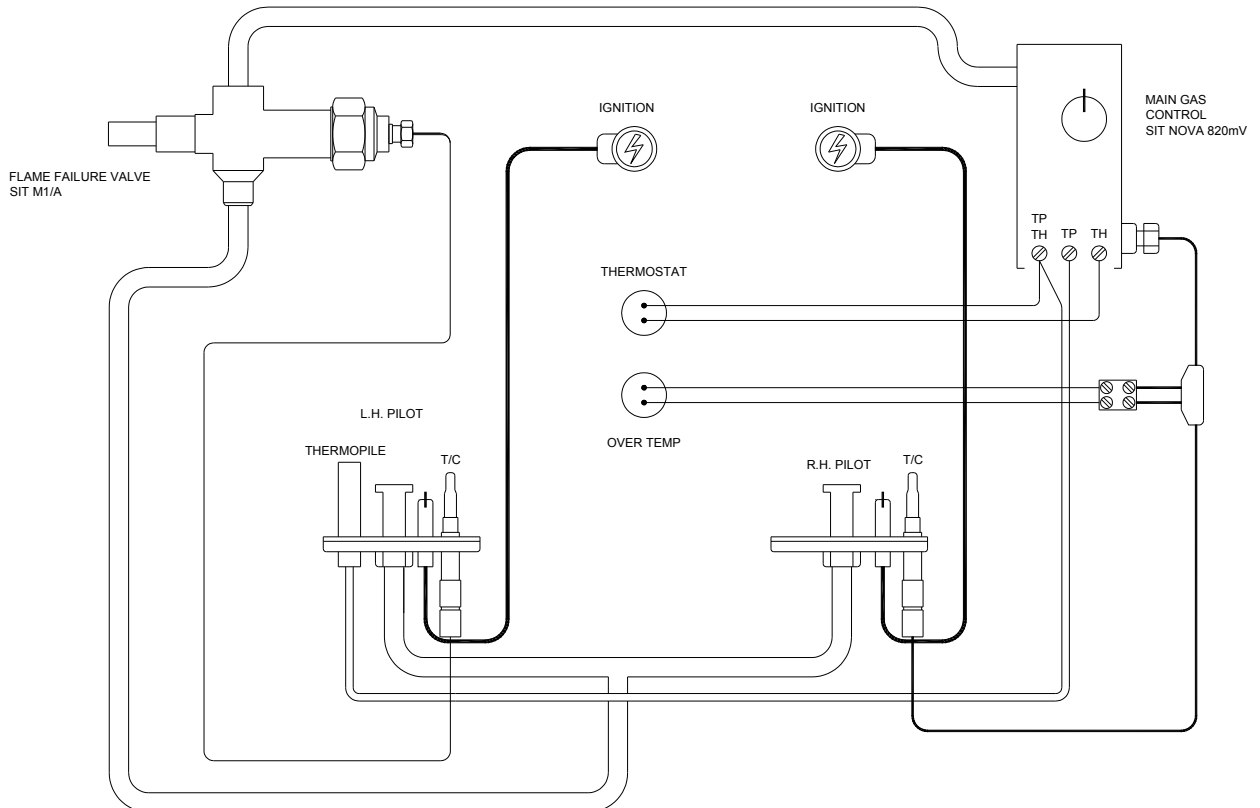

Fault	Possible Cause	Remedy
Pilot Burners will not light.	Gas supply is turned Off .	Turn On gas supply.
	Gas bottles empty.	Replace gas bottles.
	Blocked pilot burner.	Call for service.
	Faulty piezo ignition.	Call for service. NOTE: Pilot can be manually lit until repair is carried out.
Pilot Burner lights then goes out when Gas Control Button is released.	Gas valve control button not held In for long enough.	Hold In for at least 10 seconds after ignition of the pilot.
	Blocked / weak pilot.	Call for service.
	Low gas pressure.	Call for service.
	Faulty thermocouple.	Call for service.
	Faulty overtemp.	Call for service.
	Faulty gas control valve.	Call for service.
Pilot Burner goes Out during operation.	Low / fluctuating gas pressure.	Call for service.
	Weak pilot.	Call for service.
	Faulty thermocouple.	Call for service.
	Faulty overtemp.	Call for service.
	Faulty gas control valve.	Call for service.
	Overtemp tripped, pilot is turned Off if temperature exceeds 220°C.	Call for service.
Main Burners do not light.	Low gas pressure.	Call for service.
	Blocked pilot.	Call for service.
	Faulty thermostat.	Call for service.
	Faulty thermopile.	Call for service.
	Faulty gas control valve.	Call for service.
Main Burners do not burn correctly. (Burners roar or flash back to Main Injector).	Faulty burner.	Call for service.
	Blockage in flue.	Call for service.

Wiring Schematics

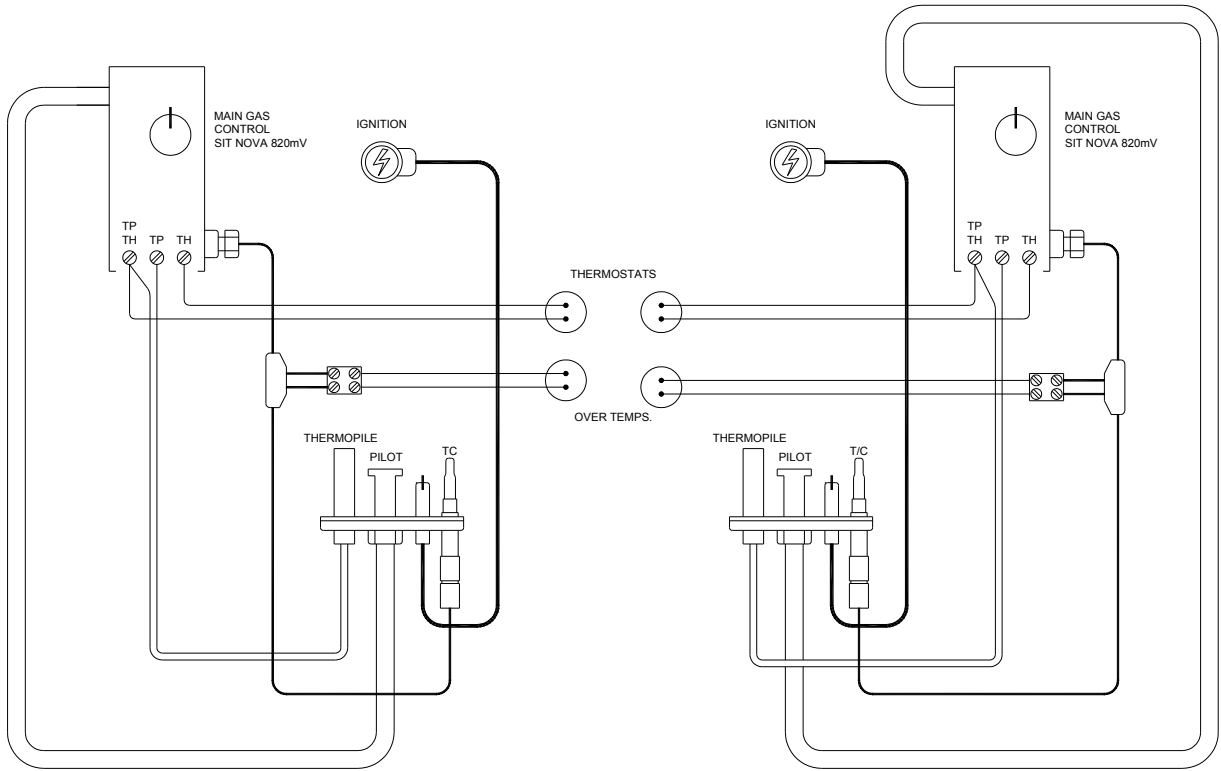

GT45 Fryer - Single Tank

GT60 Fryer - Single Tank

GT46 Fryer - Double Tank

Gas Conversion and Specifications

Conversion Procedure

Caution

Ensure Appliance is isolated from the gas supply before commencing servicing.

NOTE:

- These conversions should only be carried out by qualified persons. All connections must be checked for leaks before re-commissioning appliance.
- Adjustment of components that have adjustments / settings sealed (e.g. paint sealed) should only be adjusted in accordance with the following instructions and must be re-sealed before re-commissioning this appliance.
- For all relevant gas specifications refer to 'Gas Specifications Tables' at rear of this section.

Main Burners

1. Remove main burner injectors and replace with the correct size injectors as shown in **Gas Specifications** table.

Pilot Burners

1. Remove the following:-
 - Gas supply tube to pilot burner.

NOTE: Appliances fitted with piezo igniter electrodes, remove electrode from mounting bracket before unscrewing pilot supply tube.

2. Remove pilot burner injector and replace with correct size injector as shown in **Gas Specifications Table** at rear of this section.
3. Refit the following:-
 - Gas supply tube to pilot burner.
 - Piezo igniter electrode.

Gas Conversion and Specifications

Gas Control Valve

NOTE: For Twin Tank Fryers only, the units will be fitted with 2 gas control valves. These valves operate independently of each other. Gas regulator and pilot adjustment will need to be carried out separately for each gas valve.

Main Burner Supply Pressure Check

- Connect a manometer to the upper test point (Supply Pressure) on the gas control valve.

Main Burner Operating Pressure Adjustment

- Connect a manometer to the lower test point (Burner Pressure) on the gas control valve.
- Remove slotted cap to reveal **Operating Pressure Adjusting Screw**.
- Light main burners and turn the operating pressure adjusting screw to obtain correct burner pressure for type of gas being used. Refer to **Gas Specifications Table** at rear of this section.
- Refit slotted cap to screw adjustment point.

Pilot Burner Flame Adjustment

- Once main burner operating pressure has been set, adjust pilot burner supply so that the impingement of the pilot flame on the thermocouple and thermopile is correct and main burner pilot flame ignites main burners satisfactorily.
- Adjust pilot flame size by adjusting **Pilot Burner Adjusting Screw**. Pilot burner flame should be approximately 1" long for main burner ignition. Anti-clockwise rotation of adjustment screw will increase size of pilot flame.

Gas Type Identification Label

On completion of gas conversion, replace gas type identification label located at:-

- Rear of appliance, above gas connection point.
- Beside rating plate on inside of access door.

Commissioning

Before leaving the converted installation;

- Check all gas connections for leakage using soapy water or other gas detecting equipment.

Warning

DO NOT USE A NAKED FLAME TO CHECK FOR GAS LEAKAGES.

- Carry out a **Commissioning** check of the appliance as shown in Installation Section of this manual.
- Ensure that any adjustments done to components that have adjustments / settings paint sealed, these components are to be re-sealed.

NOTE: If it is not possible to get the appliance to operate correctly, shut 'Off' the gas supply and contact supplier of this appliance.

Gas Conversion and Specifications

Gas Specifications

- Australia

	Natural Gas	LP Gas (Propane)
Main Burner Injectors	Ø 3.10mm	Ø 1.90mm
Pilot Burner Injectors	0.62	0.35
Pilot Screw Adjustment	Full Out (CCW)	1½ turns out (CCW)
Burner Operating Pressure (*)	0.98 kPa	2.50 kPa
Supply Pressure	1.13 - 2.0 kPa	2.75 - 3.0 kPa

- New Zealand:

	Natural Gas	LP Gas
Main Burner Injectors	Ø 3.10mm	Ø 1.90mm
Pilot Burner Injectors	0.62	0.35
Pilot Screw Adjustment	Full Out (CCW)	1½ turns out (CCW)
Burner Operating Pressure (*)	0.98 kPa	2.50 kPa
Supply Pressure	1.13 - 2.0 kPa	2.75 - 3.0 kPa

- United Kingdom & EU (CE):

Category: II_{2H3P}(20. 37), II_{2H3B/P}-(20, 28-30).

Flue Type: A₁.

	Natural Gas (G20)	Propane (G31)	LP Gas (G3 -G31)
Main Burner Injectors	Ø 3.10mm	Ø 1.90mm	Ø 1.90mm
Pilot Burner Injectors	0.45	0.30	0.30
Pilot Screw Adjustment	Full Out (CCW)	1½ turns out (CCW)	1½ turns out (CCW)
Burner Operating Pressure (*)	0.98 kPa	2.50 kPa	2.50 kPa
Supply Pressure	20 mbar	37 mbar	28 - 30 mbar

NOTE:

- * Measure burner operating pressure at Operating Pressure Test Point (Lower - Out) on gas control valve , this is to be carried out with both burners operating at the 'High Flame' setting. Refer to information in this section for further details.

Gas Conversion and Specifications

- All Other Markets

	Natural Gas	Town Gas (**)
Main Burner Injectors	Ø 3.10mm	Ø 6.30mm
Pilot Burner Injectors	0.62	0.75
Pilot Screw Adjustment	Full Out (CCW)	Full Out (CCW)
Burner Operating Pressure (*)	0.98 kPa	0.50 kPa
Supply Pressure	1.13 - 2.0 kPa	0.75 - 1.50 kPa

	LP Gas	Butane
Main Burner Injectors	Ø 1.90mm	Ø 1.70mm
Pilot Burner Injectors	0.35	
Pilot Screw Adjustment	1½ turns out (CCW)	
Burner Operating Pressure (*)	2.50 kPa	
Supply Pressure	2.75 - 3.00 kPa	

NOTE:

- (*) Measure burner operating pressure at Operating Pressure Test Point (Lower - Out) on gas control valve, with both burners operating at 'High Flame' setting.
- (**) TOWN GAS Option is only available with specific ex-factory built Town Gas Models, which can also be converted to any other gas. Standard models can only be converted between Nat. Gas, LP Gas and Butane, but not Town Gas.
- Refer to 'Gas Conversion and Specifications' in this manual for further details.

Replacement Parts List

Replacement Parts List

IMPORTANT:

Only genuine authorized replacement parts should be used for servicing and repair of this appliance. Instructions supplied with parts should be followed when replacing components.

For further information and servicing instructions, contact your nearest authorized service branch (contact details are as shown on reverse of front cover of this manual).

When ordering spare parts, please quote part number and description as listed below. If part required is not listed below, request part by description and quote model number and serial number which is shown on rating plate.

Controls

018094	Interrupted Thermocouple - Main Gas Valve.	
227865	Thermocouple - Flame Failure Valve	(Single Tank Models Only).
019237	Flame Failure Valve.	(Single Tank Models Only).
018089K	Gas Control Kit.	
018093	Thermopile.	
032190	Main Burner Injector (LPG (Propane)) -	ø 1.90mm.
032170	Main Burner Injector (LPG (Butane)) -	ø 1.70mm.
032310	Main Burner Injector (Nat Gas) -	ø 3.10mm.
032630	Main Burner Injector (Town Gas) -	ø 6.30mm.
018090K	Pilot Burner (includes electrode).	
018092	Pilot Injector (LPG / Butane) -	0.35.
018091	Pilot Injector (Nat Gas) -	0.62.
026393	Pilot Injector (Town Gas) -	0.75.
018095	Piezo H.T. Lead.	
227508	Piezo Ignitor.	
022575	Burner Kit.	
018145	Thermostat Knob.	
018021K	Thermostat.	
018022K	Overtemperature Thermostat.	

General

018019	Basket.	
227856	Door Magnet.	
227449	Door Handle	(GT45 / GT46).
227459	Door Handle	(GT60).
236795	Drain Valve.	
018147	Drain Extension.	
018176	Drain Stick.	
228576	Basket Tray	(GT45).
228577	Basket Tray	(GT46).
228578	Basket Tray	(GT60).
228761	Lid c/w Handle	(GT45 / GT46).
228762	Lid c/w Handle	(GT60).
227850	Adjustable Leg - 150mm.	
229674	Rear Roller Assy.	

Accessories (Optional)

228793	450mm (Fryer) Plinth Kit.
228794	600mm (Fryer) Plinth Kit.

Gas Conversion Kits

Model	Gas Type to Convert to:					
	Nat. Gas	LP Gas (Propane)	Butane	Town Gas	Nat. Gas (UK)	LPG (UK-Propane)
GT45 GT46 GT60	231963	231962	231964	N/A (*)	231967	231966

NOTE: (*) Town Gas Option is only available with specific ex-factory built Town Gas models, which can also be converted to any other gas. Standard models can only be converted between Nat. Gas, LP Gas and Butane, but not Town Gas.
