

PRODUCT CARE

To ensure your products remain in the best condition throughout their lifespan, please handle them with care and follow the recommendations below.

HEATING & CHILLING YOUR PRODUCTS

Dalebrook products are intended for use in food serving and presentation where temperatures remain constant over a given period of time. We recommend that products are not subjected to dramatic changes in temperature (e.g. directly from the refrigerator to the dishwasher or into hot water). Our products can withstand food temperatures up to 120°C where the hot food is placed directly into the dish. They are not recommended for use under direct heat or in cookware such as a bain marie or a chafing dish. Our products are not for oven or microwave use.

CLEANING YOUR PRODUCTS

We recommend hand washing your products to ensure they remain in the best condition throughout their lifespan. To keep your products looking great, clean them with non-abrasive plastic pads or plastic bristles. The majority of Dalebrook products are dishwasher safe, however, it is important to avoid the use of harsh chemicals, chlorine based detergents or bleach. Where stubborn food persists, pre-soak your product in warm water and a high-quality pre-soak detergent.
