Since 1978, we've been developing footwear that improves the lives of people who are on their feet all day at work.

In this time, we've helped over six million people breeze through long working days on their feet – enabling them to become more productive, and to experience less pain and discomfort in their back, knees, legs and feet.

You'll find our full range of products – including our brand new shoes – inside this 2019 catalogue.

What makes WearerTech so different?

You spend your life on your feet – standing, walking, working. You know how your body feels at the end of a long shift. Tired, sore, stiff... maybe a little bit broken. WearerTech shoes let you finish a busy working day with fresh feet.

WearerTech shoes are put through their paces in real-life kitchens, hotels and restaurants, by hardworking chefs, kitchen workers and waiting staff. People just like you.

When you choose WearerTech, you know you're getting footwear that's designed with you in mind.

Specialist shoes for hardworking feet

WearerTech shoes are thoughtfully designed to make your working life that little bit safer, better, and more comfortable. What's more, these clever shoes come with added science – literally!

We work closely with the University of Salford to combine biomechanics (the way your body works) with material science (the way stuff works) to produce shoes that provide unbeatable comfort and support.

Since 2015, experts in the knee, ankle and foot research group have been helping us create footwear with a difference.

The biomechanical data and knowledge of advanced ergonomics we gain from working with them helps us stay at the top of our game when it comes to designing shoes that take the pressure off your hardworking feet.

But we don't stop there...

Hold on tight – we're about to get technical.

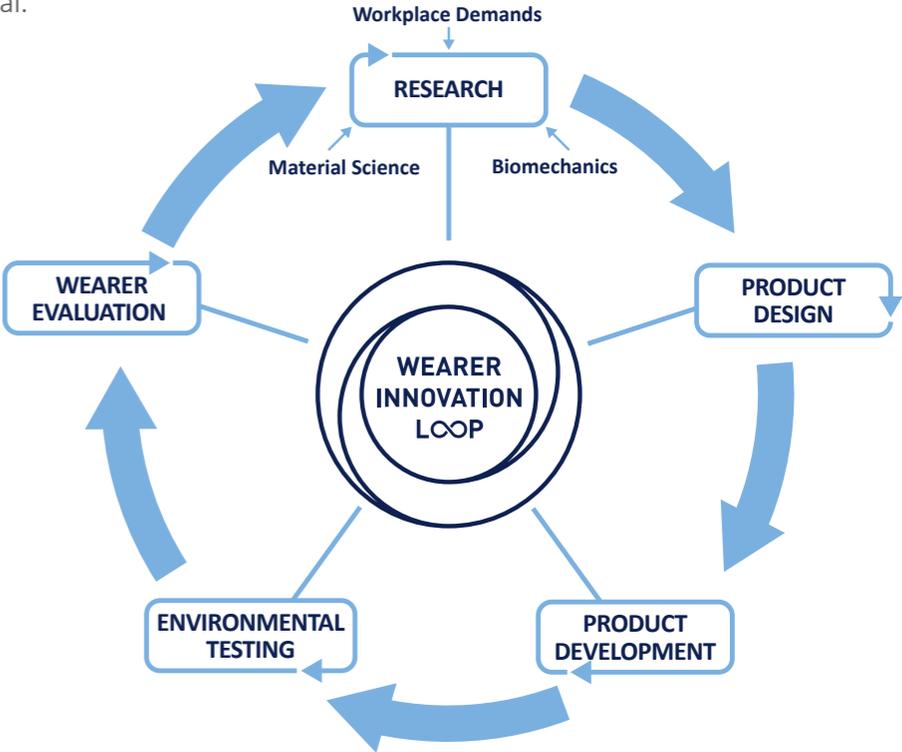

Every feature of every WearerTech shoe goes through a five-stage research and development cycle of design, refinement, testing and improvement.

We call this process our **Wearer Innovation Loop**.

It drives our work with the health sciences faculty and the knee, ankle and foot biomechanics research department at the University of Salford, and helps us build our understanding of advanced ergonomics.

Why? Simple. One thing gets us out of bed in the mornings – and that's manufacturing shoes that make a difference to your day.

WearerTech shoes: a small step to a better, more comfortable day.

All WearerTech shoes combine world-leading safety features – like our revolutionary UltraGrip® soles – with optimum comfort and support for long shifts on your feet.

What's new?

2019 sees the launch of four exciting new shoes that take foot comfort to a whole new dimension.

This ground-breaking new range comes with a choice of three removable insoles for customisable comfort, while a stylish twist means they're sure to be a popular choice with hospitality and waiting staff, as well as chefs and people working in kitchens.

Because one size doesn't fit all

We've all got slightly different feet. So a shoe that fits one person like a glove won't feel half as comfortable to another.

Especially at the end of a 12-hour shift.

Our research with the University of Salford showed that the contact made between the bottom of our feet and the inside of our shoe is a game changer. The greater the contact, the lower the pressure, the lower the discomfort.

That's why our new range of shoes offer chefs, kitchen workers and restaurant staff a choice of three removable insoles, designed to complement the natural curve of the feet and provide customisable comfort in a choice of soft, medium or firm – maximising contact in areas that need it, without compromising comfort in areas that don't.

	<p>1 Contoured shape Designed to complement the natural shape of the foot, increasing the contact between your foot and the shoe, and reducing the areas of high pressure that cause discomfort</p>
	<p>2 Dual density Contact is maximised in areas that need it, and minimised in areas that don't</p>
	<p>3 Variations in arch hardness A choice of three insoles – soft, medium or firm – provide customisable comfort for feet of all shapes and sizes</p>
	<p>4 Removable insole Time for a change? Our insoles are fully replaceable – simply switch out the old and replace with the new</p>
	<p>5 Maximum ventilation Maximum ventilation helps keep your feet cool, fresh and dry</p>

Our research found that wearing a more comfortable shoe for just **3 hours** reduced

TRANSFORM

1 Slip-resistant sole

Cutting-edge, super slip-resistant technology and puncture-resistant sole helps to reduce accidents at work

2 Stretch lining

Smooth lining eliminates rubbing and discomfort and provides a comfortable fit

3 Breathable uppers

Air flow from the shoe keeps feet at a comfortable temperature and improves foot health

4 Raised heel

Helps distribute pressure within the shoe for improved comfort

5 Lightweight

Minimises the stress and strain on feet and legs throughout the day

6 Closed back

Helps to ensure a secure fit

The Transform range

Our revolutionary microfibre trainer is the first work shoe of its kind to come with a choice of three insoles for customisable comfort and support. This lightweight work shoe combines cutting-edge science with customer research, in a host of features designed to reduce the pain and discomfort caused by long, punishing shifts in a hot kitchen or a busy restaurant.

Like all WearerTech shoes, Transform features our world-leading UltraGrip® sole to reduce workplace slips, trips and falls, and a smooth, stretch lining to eliminate rubbing – while its fresh, stylish look make it the perfect choice for customer-facing staff.

INVIGORATE

1 Slip-resistant sole

Cutting-edge, super slip-resistant technology and puncture-resistant sole to reduce accidents at work

2 Supportive foot shape

Ergonomically designed footbed to ease the pressure of long periods of standing and help to improve your posture

3 Large toe box

Allows your toes to sit naturally and comfortably within the shoe, with plenty of wiggle room

4 Shock-absorbing material

Reduces the impact and strain of every step

5 Side vents

Specially designed vents are shaped and angled to keep your feet cool and dry

6 Raised heel

Helps distribute pressure within the shoe for improved comfort

7 Adjustable strap

Can be worn in forward or backward position, to securely hold your foot while making the shoes quick and easy to slip on and off

The Invigorate range

Developed using a combination of scientific research and customer feedback, Invigorate is a truly clever clog. Available in a choice of seven colours, this popular work shoe provides comfort, support and protection for hardworking feet.

Invigorate incorporates a range of features designed to relieve the pressure and fatigue of long shifts in a hot kitchen. From super slip-resistant soles to reduce slips, trips and falls, through angled side vents to an adjustable strap that securely holds the foot while making the shoes quick and easy to remove.
