

## THE CHUTE – Cutlery Loss Prevention System

Caterers lose cutlery every day when several pieces are accidentally thrown away with waste food.

Chute Cutlery Retrievers prevent this loss. Simply fit the Chute over your waste bin and its powerful magnets will attract any cutlery accidentally directed into the bin.

There are three different sizes of Chute to suit various waste bins or to fit into dishwasher tables. Chutes are of sturdy construction being manufactured from high-impact plastic. They are very reliable, have no moving parts and as the magnet assembly is completely enclosed moisture and bacteria cannot penetrate the Chutes. Chutes are easy to clean and are chemical resistant.

The Chutes will attract most stainless steel cutlery as they contain ferrous metal. 18/8 and 18/10 stainless steel and gold plate cutlery contains only a small amount of ferrous metal and will not be attracted to chute magnets.

Bins not included in prices.
